Your Water • Your Environment • Our Mission

WONDERING ABOUT YOUR WELL WATER?

The H₂O Quality Lab, a Division of Prince William Water, can test the quality of your water.

The Environmental Protection Agency (EPA) recommends testing your well annually for total coliform bacteria, nitrates and pH levels. If you need your well water tested for any of these parameters, please visit <https://bit.ly/46TnSMY>. You can also reach us at H2Owaterquality@pwwater.org. Test fees range from \$33 to \$40. Water sample collection fees may apply.

The EPA also recommends testing your well water for the following reasons if:

There are known problems with ground water or drinking water in your area.

Conditions near your well have changed significantly due to flooding, land disturbances, or new construction or industrial activity.

You replace or repair any part of your well system.

You notice a change in your water quality (e.g. odor, color, taste).
