

SALT SMART TIPS FOR WINTER HELPERS

Here are a few ways you can help protect our waterways, environment and pets during the wintertime when using de-icing salt!

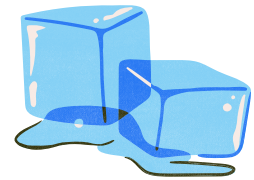

1. Always Shovel First!

Clear snow from sidewalks and driveways before the snow turns into ice. This will decrease the amount of salt needed.

2. More Isn't Always Best!

A 12oz cup of salt is enough to melt ice on 10 sidewalk squares!

3. Spread Salt Evenly!

A little salt goes a long way! Salt should be spread with space in between each grain.

4. Clean up!

Always sweep up any leftover salt to prevent it from being washed away and into our water systems and environment.
