

WHAT IS THE COST OF PROVIDING ADEQUATE CROSS CONNECTION PROTECTION IN A BUSINESS?

The typical cost of a backflow preventer will vary in price depending on the size and type of assembly required. Since a backflow preventer may be the only barrier between your customers and contaminated water, investing in, installing and keeping the equipment maintained is minimal compared to the potential liability of a backflow incident.

WHAT IS THE SERVICE AUTHORITY'S ROLE IN BACKFLOW PREVENTION?

The Service Authority is responsible for maintaining records on testable backflow prevention devices connected to the public water distribution system, enforcing state laws regarding proper installation/maintenance and sending out annual notices to property owners/responsible parties with testable backflow devices due for re-certification.

BACKFLOW prevention

and

CROSS CONNECTION control

Business owners must protect the potable water supply and the health of the public by installing and maintaining approved backflow prevention equipment on their premises.
